

DeFi staking

Prepared by Kirill Sizov

What is staking?

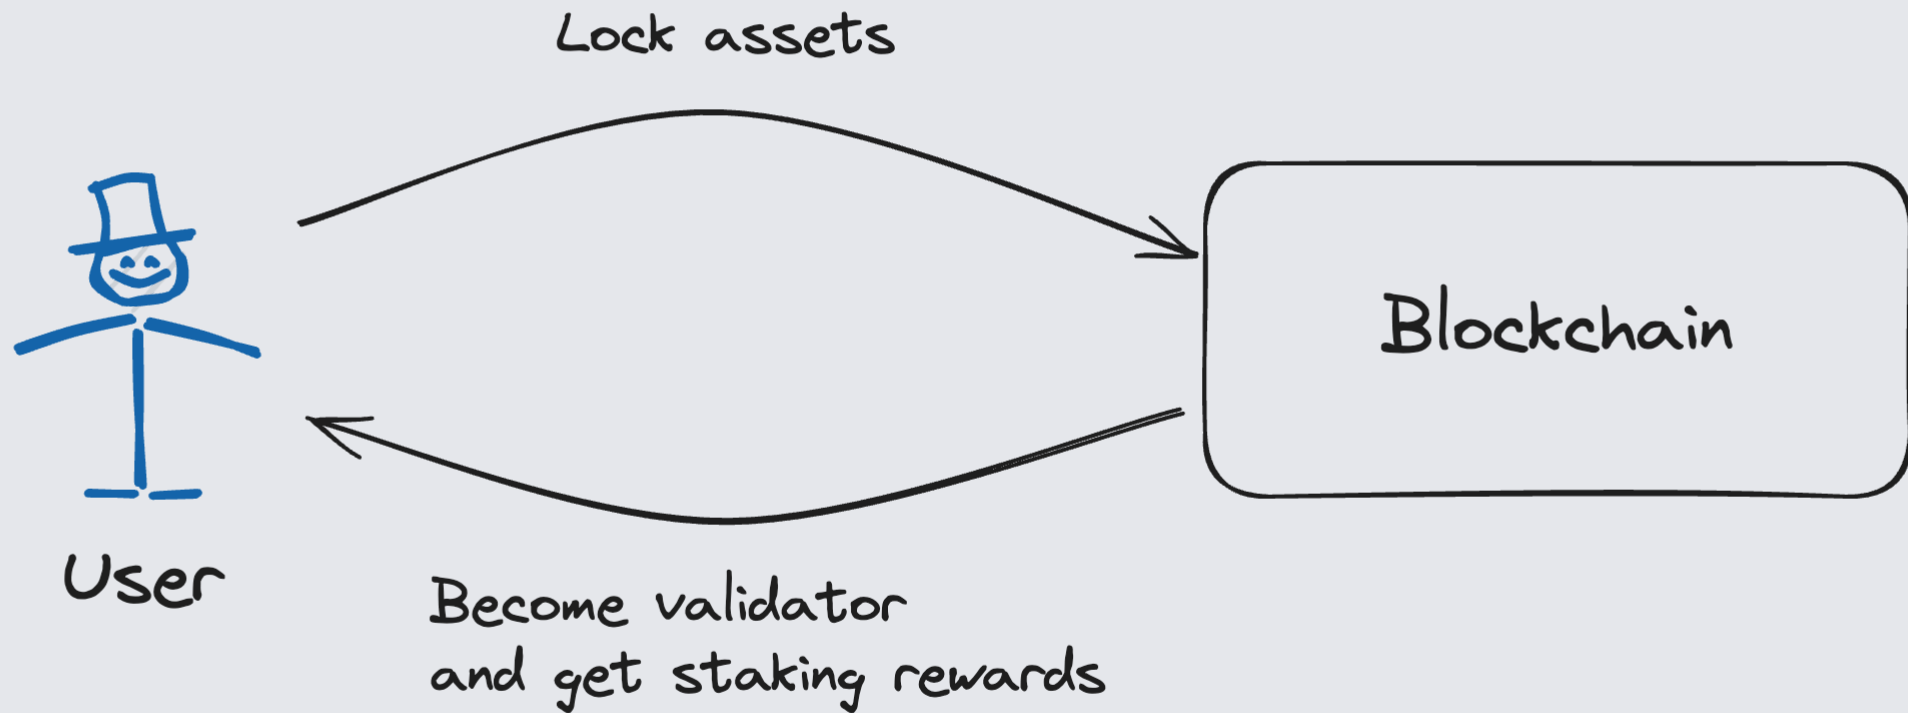

Стейкинг картошки,
листинг в конце августа!

Liquid staking

Proof of Stake (PoS) recap

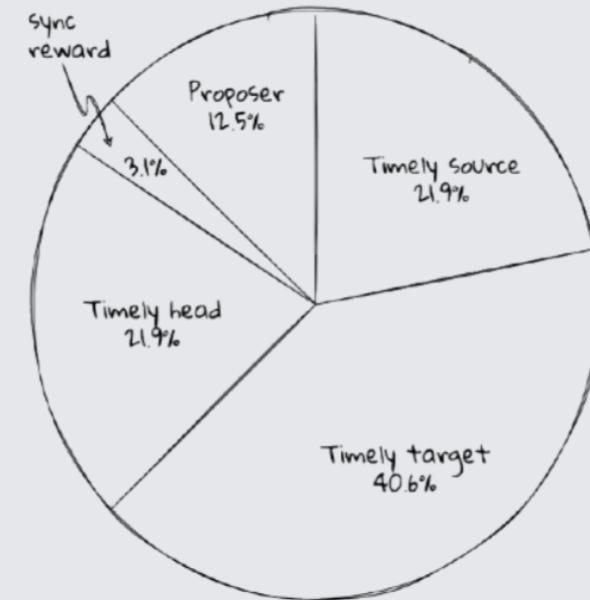

How to become validator in Ethereum

- Deposit 32 ETH to the Ethereum deposit contract.
- Set up and run a validator node with execution and consensus clients.

Validator rewards

- Block proposals
- Attestations
- Sync committee participation
- Slashing reporting

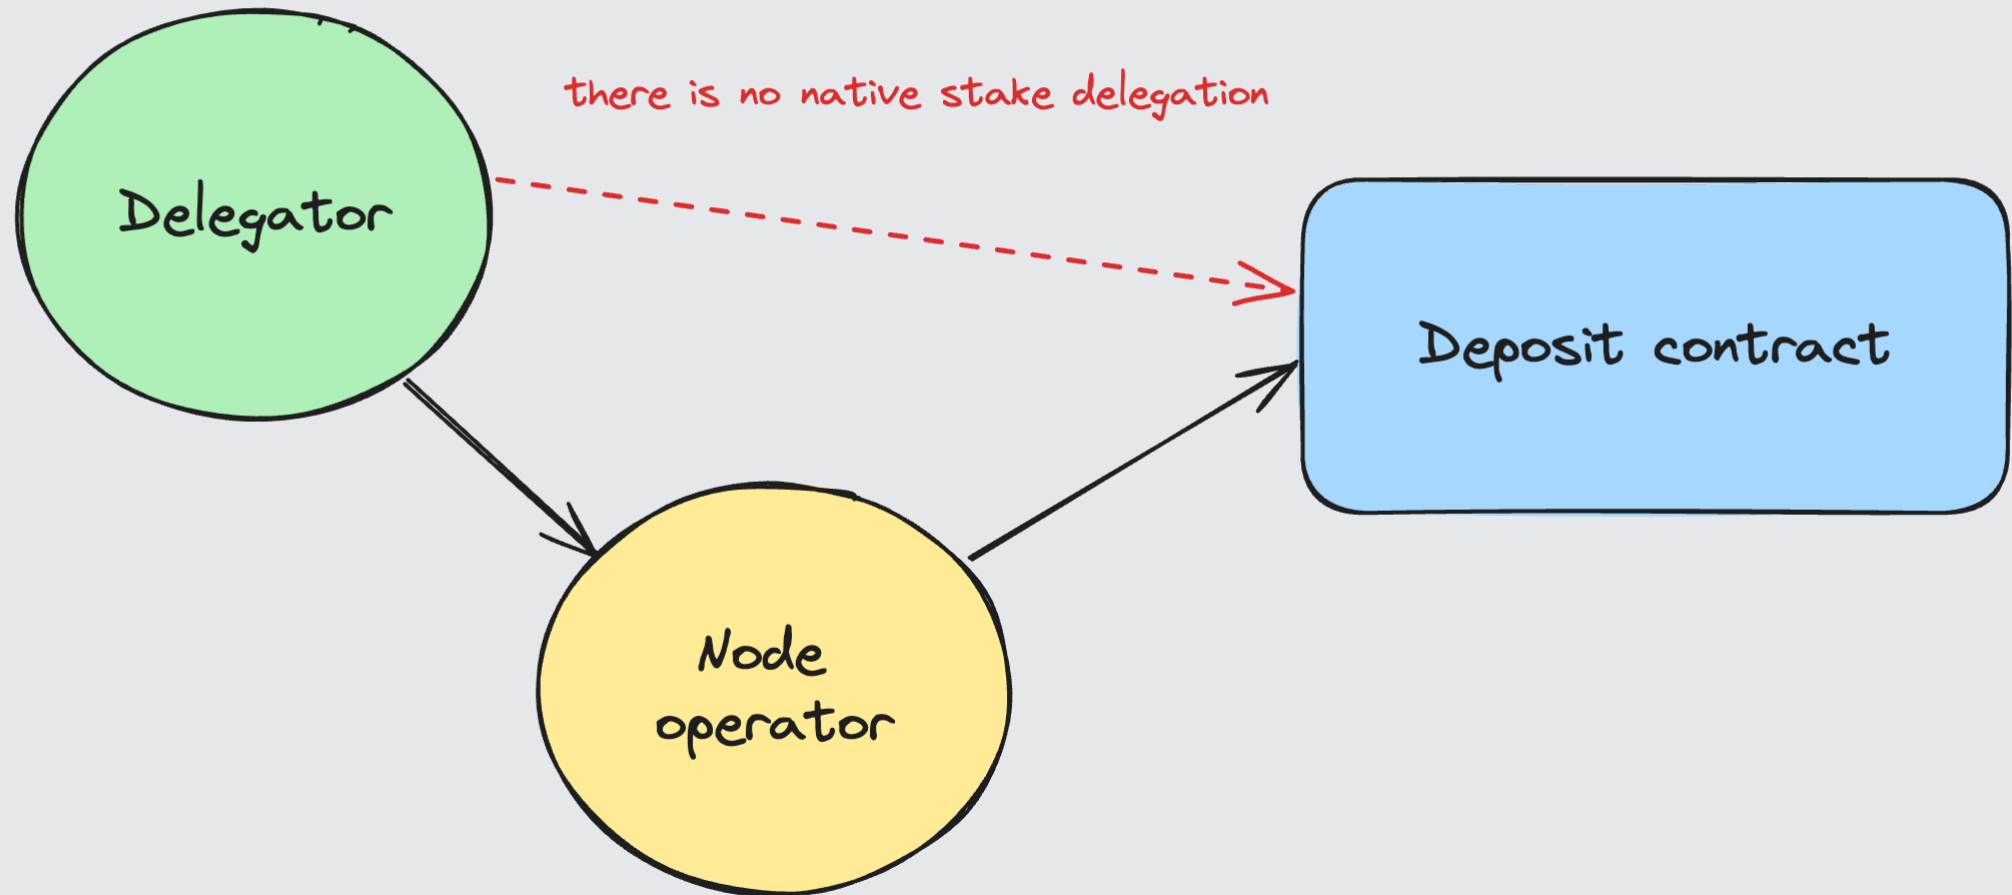

The proportion of a validator's total reward derived from each activity.

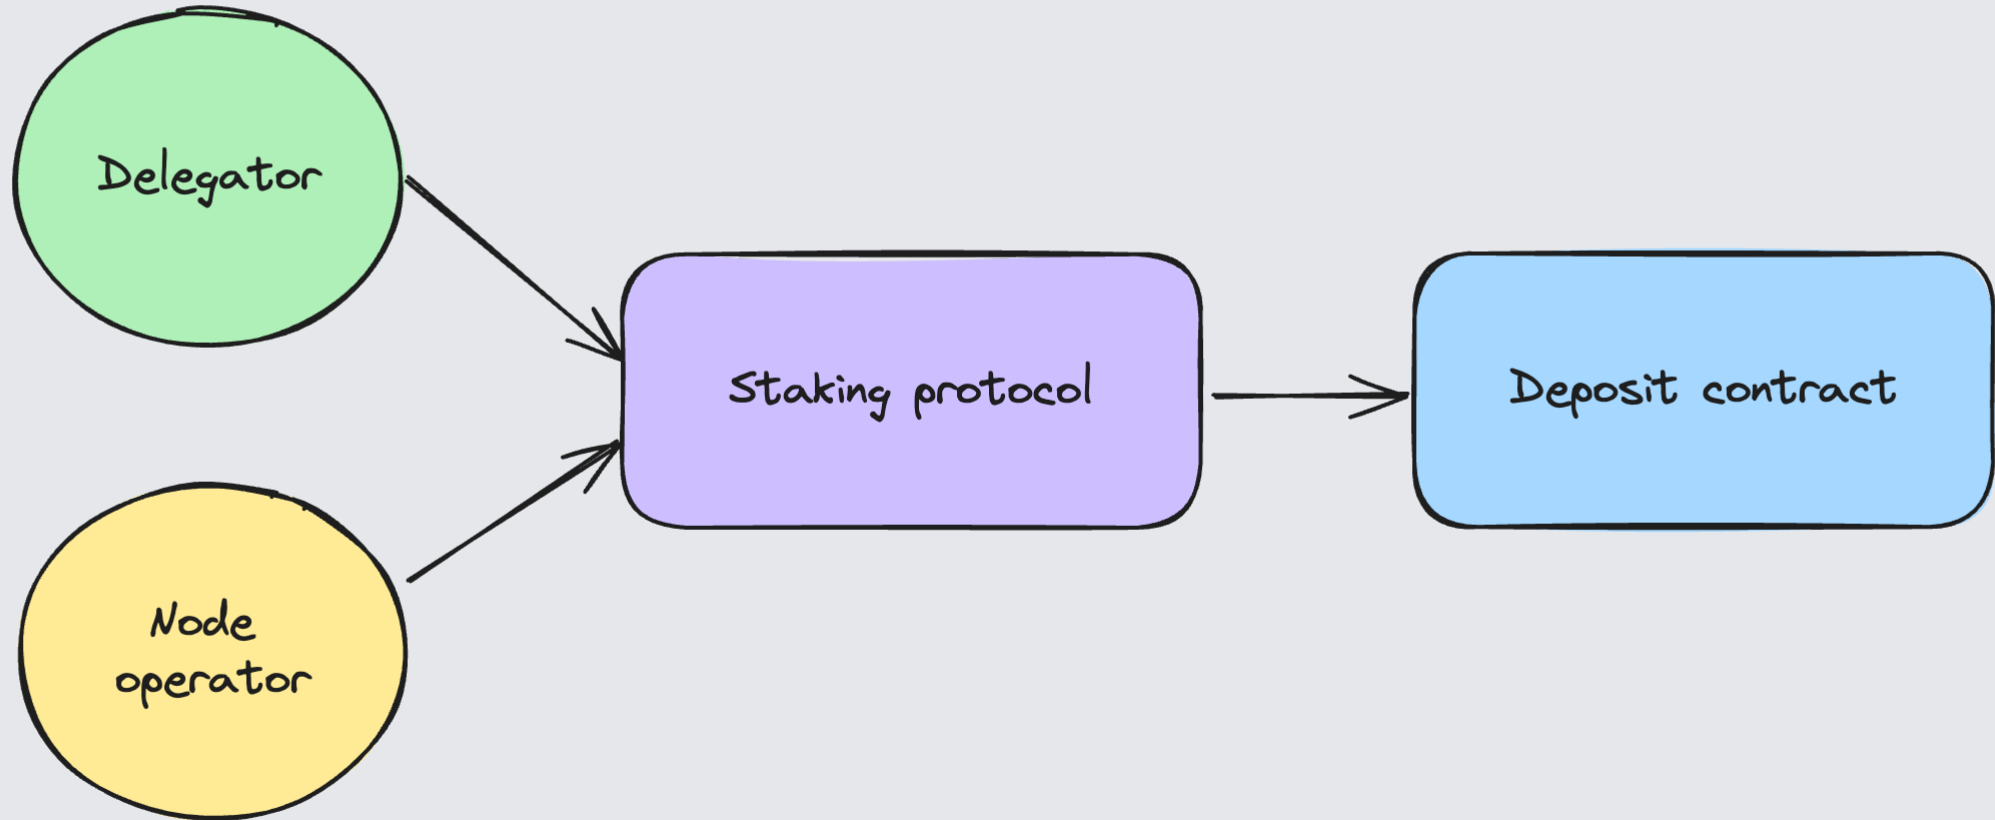

Difficulties

- Expensive
- Difficult to run a node
 - penalties for outages
- Volatile rewards

Delegated staking

Staking protocols

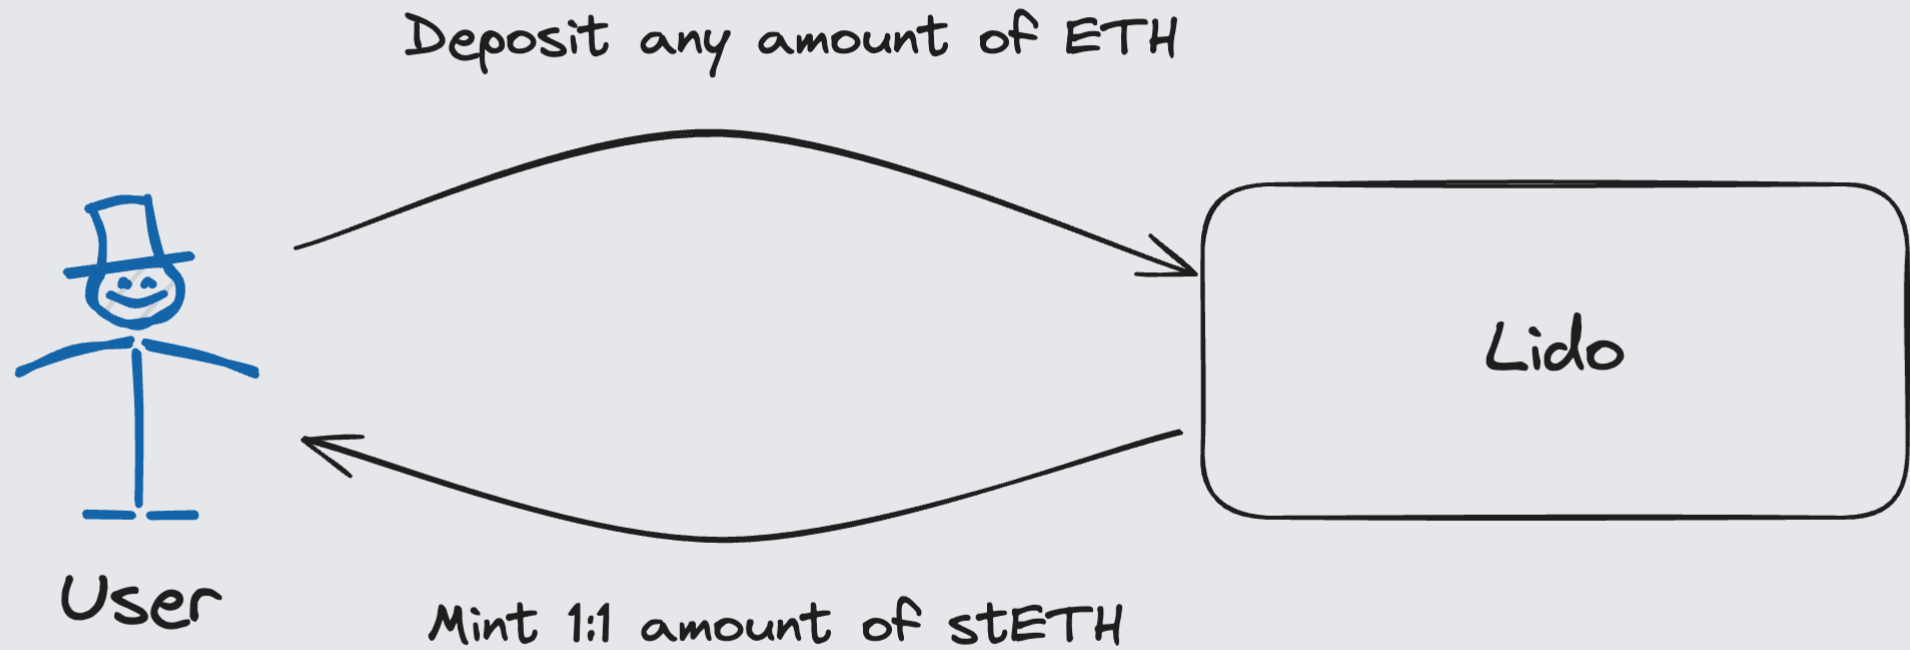

Lido

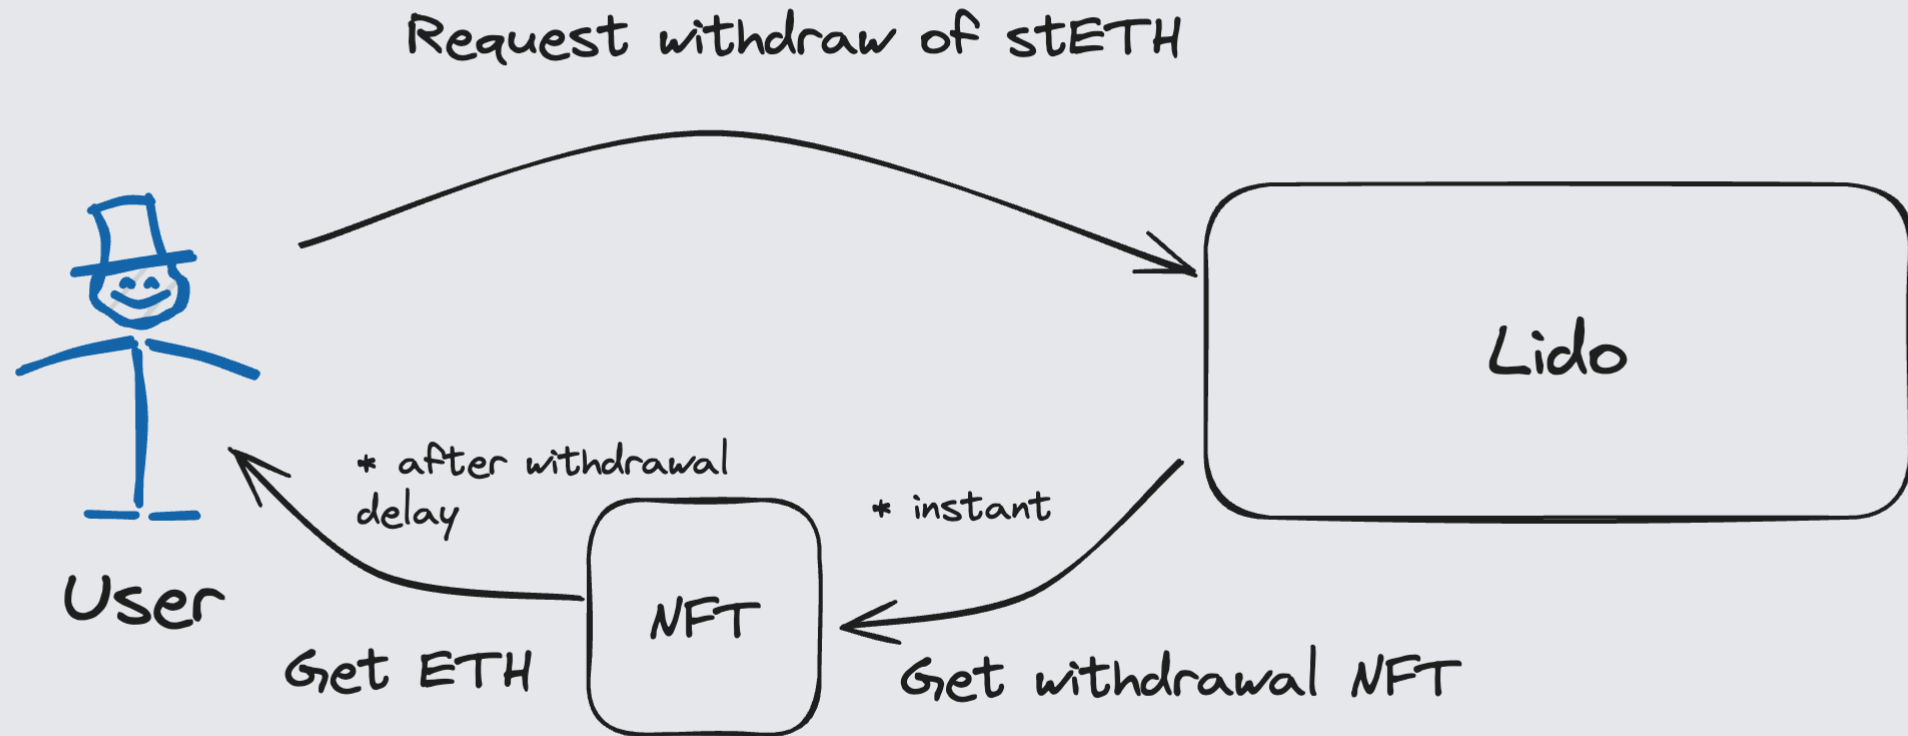

- Largest liquid staking protocol

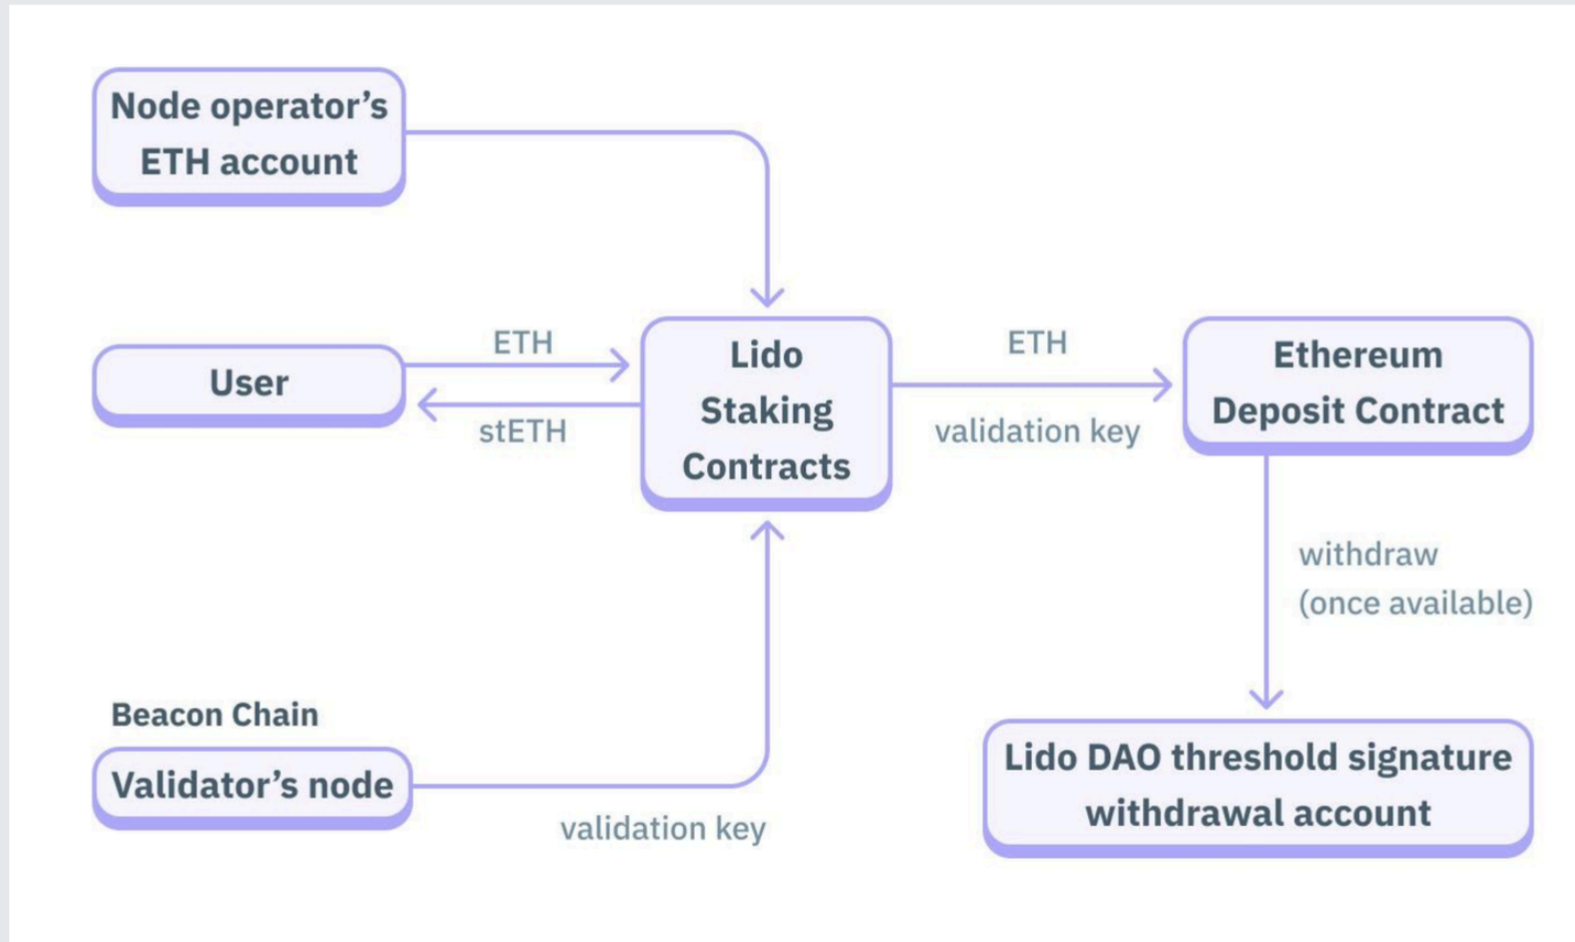

Lido deposit

Lido withdrawal

staking is neat
passive income

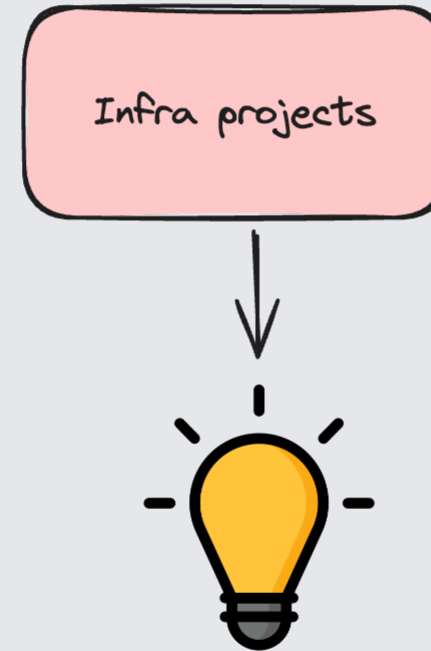

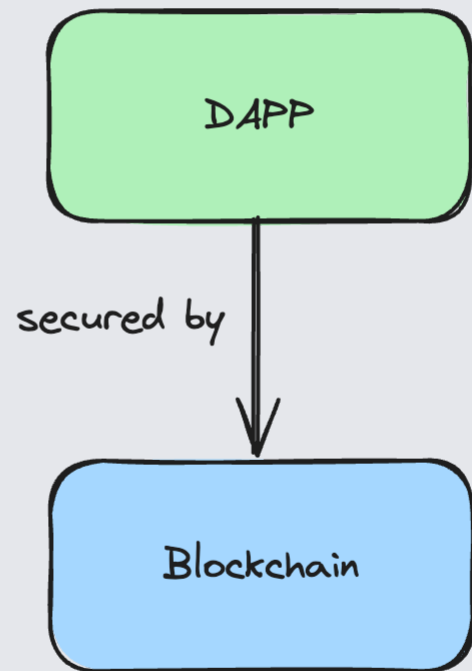

Lol restake for 10%

Problem statement

Problem statement

Build another blockchain?

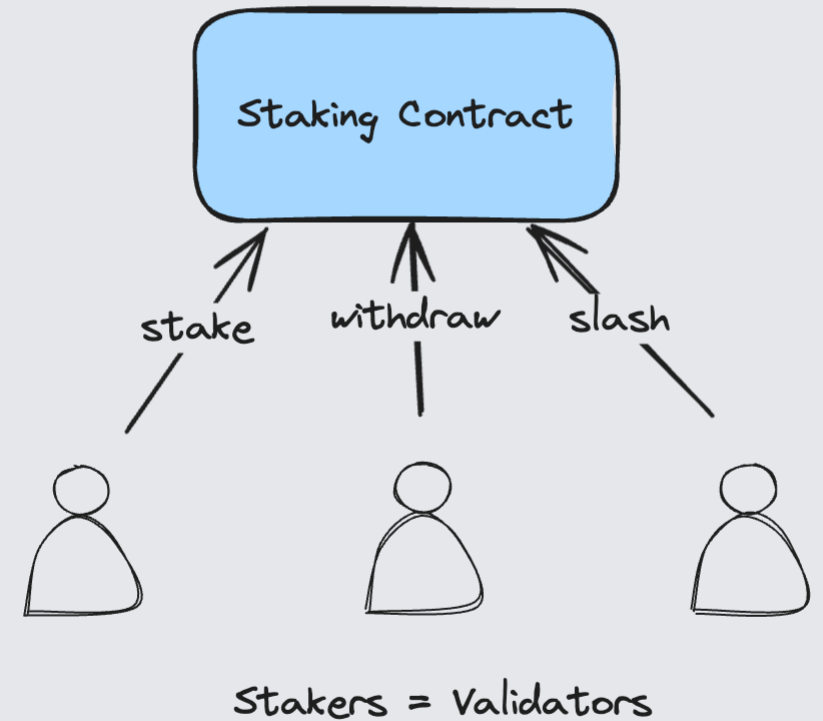

* Which consensus mechanism to use?

Difficulties to build new PoS network

- Necessity to launch a new native token.
- Low liquidity makes new token vulnerable to price manipulation and volatility.
- Trust and risk concerns make attracting stakers challenging.

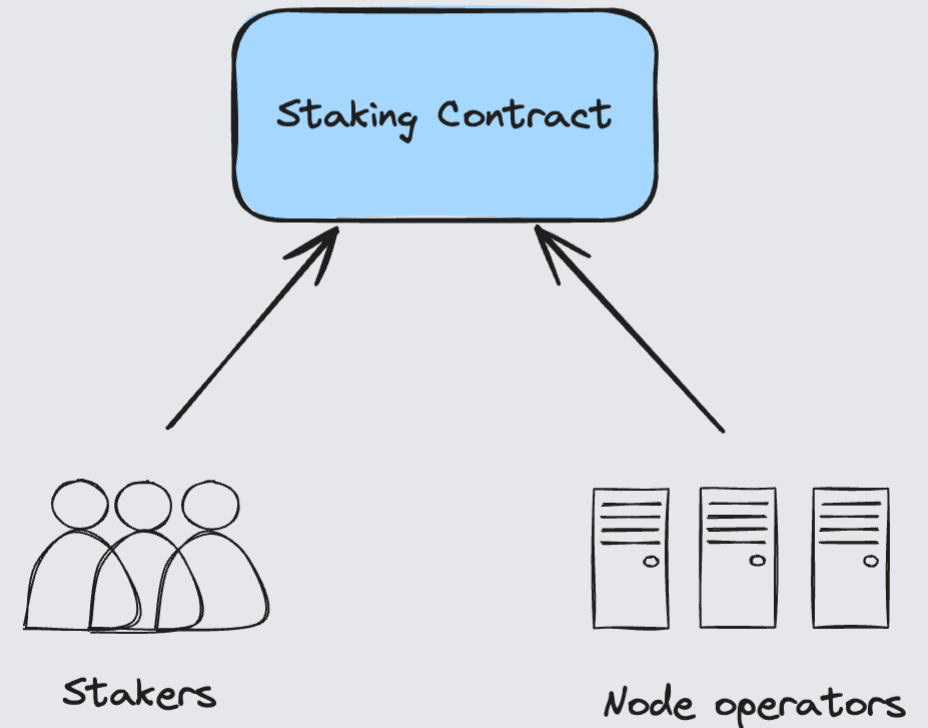

Solution: use existing blockchain

- Store staking funds on-chain.
- Register as a validator by providing the required staking amount to the smart contract.
- Use any token for staking, eliminating the need to launch a new native token.
- However, attracting stakers remains a challenge.

Solution: separating stakers and validators

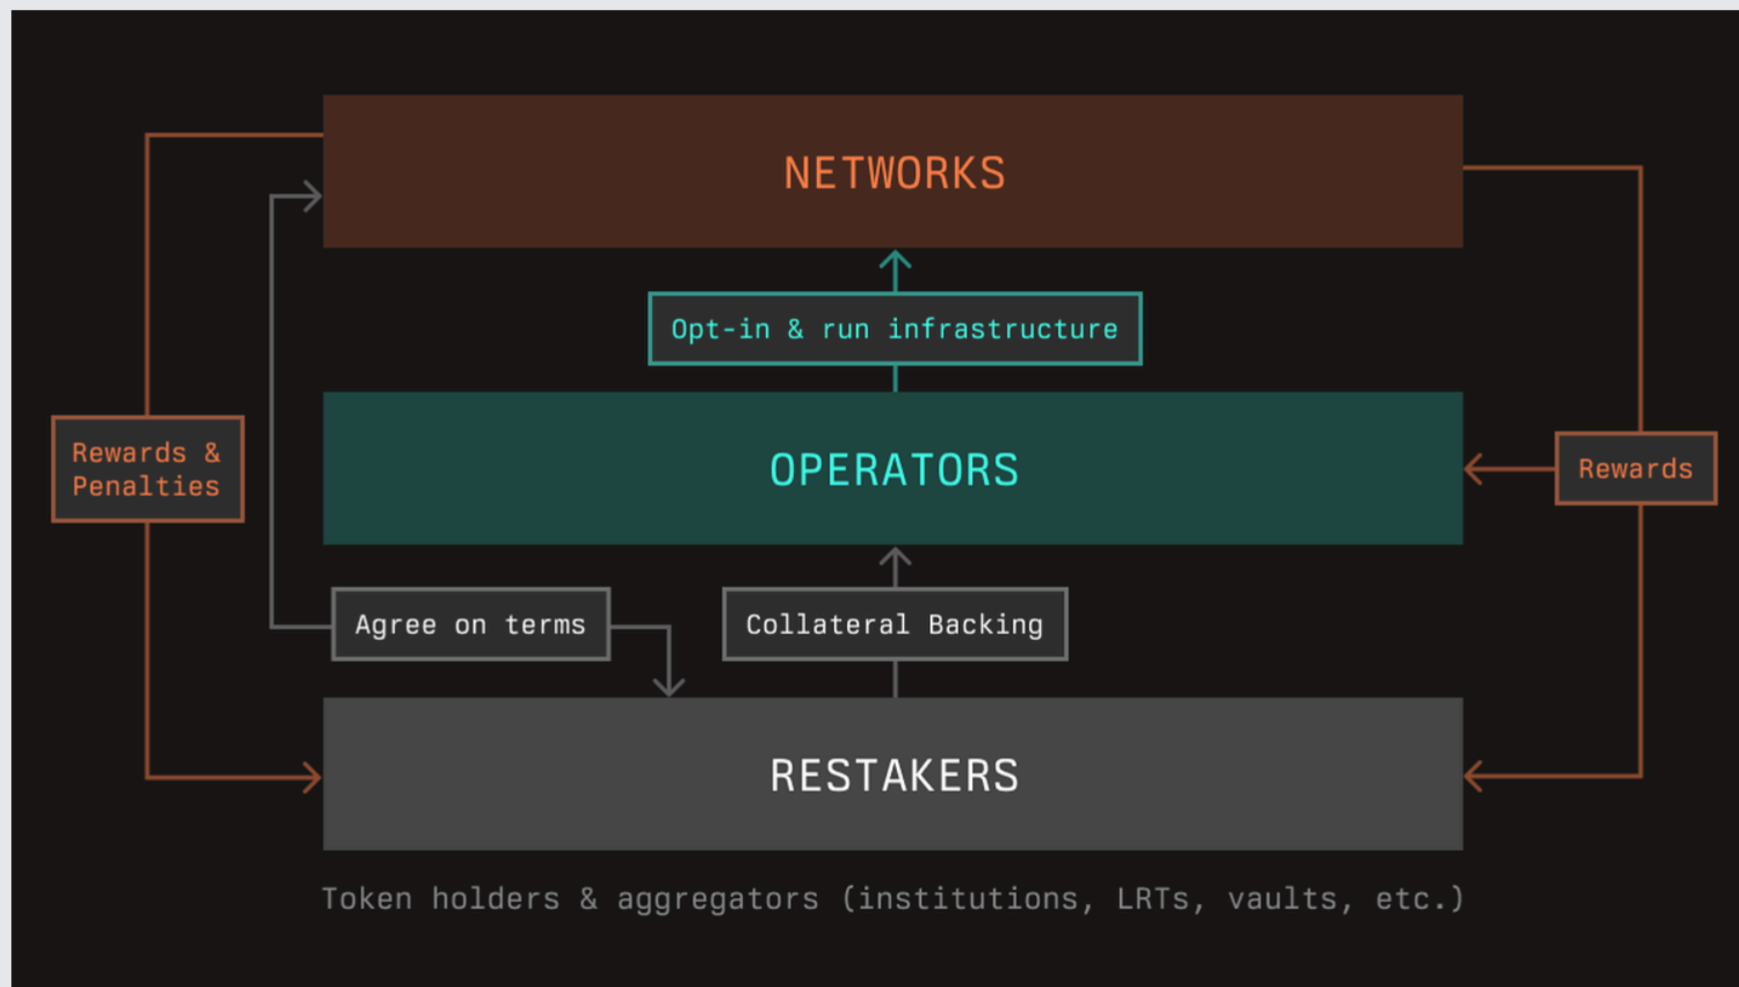

- Stakers select an operator to stake for.
- Stakers can stake any amount, thus reducing the entry barrier for stakers.
